
Index to Volume 3, Numbers 1–4, Pages 1–226 (1985)

Subject Index

(N) denotes a news item

Algorithms
  binocular stereo algorithm based on the disparity-gradient limit and using optimization theory 177
  efficient planar convex hull algorithm 29
  fast thinning algorithm for binary images 71
  relaxation labelling algorithms — a review 206
Alvey
  computer vision and image interpretation research programmes 146
Angiography
  knowledge-based analysis of carotid angiograms 217
Array processors (N) 45, 141

CADCAM system (N) 47
Calibration
  automatic recalibration of moving cameras in stereo vision systems 119
Compression
  video signals (N) 94
Computer interface (N) 47
Computer vision
  overview of the computer vision and robotics programme at the University of Utah 136
Convex hull
  efficient planar convex hull algorithm 29
Convolution
  implicit convolution 15
CRT converter (N) 95

Data integration
  image segmentation by conventional and information-integrating techniques: a synopsis 50
Digital mapping (N) 91
Digital signal processors (N) 140
DOG filters
  use of multiple difference of Gaussian filters to verify geometric models 192

Flat square TV tubes (N) 44

Geometric models
  use of multiple difference-of-Gaussian filters to verify geometric models 192
Graphic display processor (N) 96
Graphics workstation controller (N) 140

Hidden surfaces
  three-dimensional hidden-surface removal for signal return modelling: experimental results 24
Hierarchical structures
  space and time efficiency of the forest-of-quadtrees representation 63

Image classification
  multiband image classification with a distributed architecture 80
Image database 111
Image digitizer (N) 45
Image processors (N) 95, 139

Machine vision
  for industry: tasks, tools and techniques 123
Machine vision system (N) 43
Macroscope (N) 46
Micrographics camera (N) 143
Moving cameras
  automatic recalibration of moving cameras in stereo vision systems 118
Moving sensors
  direct surface reconstruction from a moving sensor 170
Multiband classifiers
  multiband image classification with a distributed architecture 80

Online inspection (N) 43
Optical scan video (N) 45
Optic flow
  optic flow segmentation as an ill-posed and maximum likelihood problem 163

PC imaging (N) 143

Quadtrees
  space and time efficiency of the forest-of-quadtrees representation 63

Range filters
  local-intensity subrange filters and their properties 99
Rank filters
  properties, implementations and applications 3
Relaxation labelling
  relaxation labelling algorithms — a review 206
Robotics
  overview of the computer vision and robotics programme at the University of Utah 136
Robotic sensors (N) 91
Robot vision (N) 143

Satellite antennae (N) 139
Segmentation
  an approach to knowledge-driven segmentation 198
  image segmentation by conventional and information-integrating techniques: a synopsis 50
  optic flow segmentation as an ill-posed and maximum likelihood problem 163

  optic flow segmentation as an ill-posed and maximum likelihood problem 163

SEM image processing (N) 91
Signal-return modelling
three-dimensional hidden-surface removal for signal-return modelling: experimental results 24
Solid modelling (N) 141
Stereo matching
binocular stereo algorithm based on the disparity-gradient limit and using optimization theory 177
Stereo vision
automatic recalibration of moving cameras in stereo vision systems 119
Supercomputers (N) 43, 93
Surface descriptions
from stereo and shading 183
on describing complex surface shapes 153
Surface mapping simulator
three-dimensional surface mapping simulator: theory, capabilities and operation 36
Surface reconstruction
direct surface reconstruction from a moving sensor 170
Systolic array (N) 42

Thermal imagers (N) 142

Thinning
fast thinning algorithm for binary images 71

Video imager/editor (N) 139
Video monitor (N) 42
Video processing module (N) 140
Visual sensors (N) 91

Title Index

An approach to knowledge-driven segmentation 198
Automatic recalibration of moving cameras in stereo vision systems 118
Binocular stereo algorithm based on the disparity-gradient limit and using optimization theory 177
Direct surface reconstruction from a moving sensor 170
Efficient planar convex hull algorithm 29
Fast thinning algorithm for binary images 71
Image database 111
Image segmentation by conventional and information-integrating techniques: a synopsis 50
Implicit convolution 15
Knowledge-based analysis of carotid angiograms 217
Machine vision for industry: tasks, tools and techniques 122
Multiband image classification with a distributed architecture (Short Communication) 80
On describing complex surface shapes 153
Optic flow segmentation as an ill-posed and maximum likelihood problem 163
Overview of the computer vision and robotics programme at the University of Utah (Research Directory) 136
Properties, implementations and applications of rank filters 3
Range filters: local-intensity subrange filters and their properties 99
Relaxation labelling algorithms — a review 206
Space and time efficiency of the forest-of-quadtrees representation 63
Surface descriptions from stereo and shading 183
Three-dimensional hidden-surface removal for signal-return modelling: experimental results 24
Three-dimensional surface mapping simulator: theory, capabilities and operation 36
Use of multiple difference-of-Gaussian filters to verify geometric models 192
